OPERATING WEIGHT 18.000 kg

BUCKET CAPACITY 3,1 - 4,5 m³

KOMATSU® WA380-5

WA380-5

WA380-5 WHEEL LOADER

WALK-AROUND

The new WA380-5 wheel loader: The perfect combination of performance, comfort and economy. Never-before experienced comfort in the SpaceCab cabin, enormous tractive force and the lowest fuel consumption in it's class. And it's whisper-quiet in use, almost maintenance-free and incredibly productive with semiautomatic loading function (optional equipment). This is a wheel loader that has clearly earned its 5 stars!

Excellent Driving Convenience

- SpaceCab[™] cabin
- Optimum all-around view
- Interior noise level is only 70 dB(A)*
- · Air conditioning as standard
- 2-way adjustable steering column
- Air-cushioned high comfort seat
- Operation with PPC short levers or EPC fingertip control (option) For more detail, see page 10

Overwhelming Productivity

- High-torque low-emission engine
- Extremely low fuel consumption
- Choice of operating modes for engine and transmission
- Superior dumping height and reach
- Series production ECSS load stabiliser
- Semiautomatic loading function (option)
- Completely integrated payload meter (option) *For more detail, see page 4*

Diverse and Flexible

 Comprehensive range of attachments for a wide variety of uses For more detail, see page 12

Ecological

- Meets TIER II emission regulations
- Exterior noise level 104 dB(A)*

KOMATSU

WA380-5

WHEEL LOADER

NET HORSEPOWER 140 kW 187 HP

OPERATING WEIGHT 18.000 kg

BUCKET CAPACITY 3,1 - 4,5 m³

Long Service Life and Reliable

- Reliable original Komatsu components
- Robust torsionally resistant frame
- Maintenance-free fully hydraulic, wet disc service and parking brakes
- · Heavy-duty axles
- Sealed DT wiring harness connector *For more detail, see page* 7

GALED

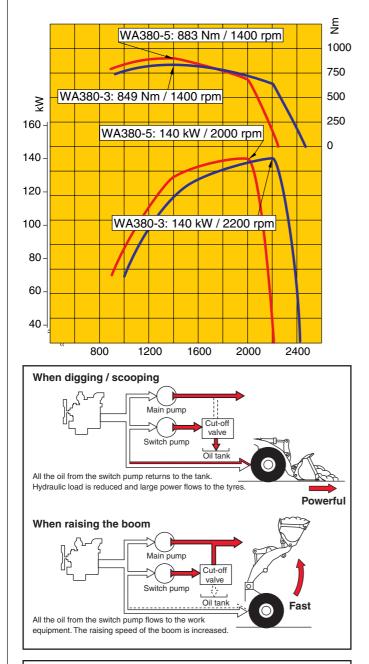

- EMMS monitoring system
- Cab controlled reversible fan
- Swing-out oil and air to air charge cooler for easy access and cleaning
- · Gull-wing doors for easy ground level access
- Extended engine oil change interval

80

• Centralised lubrication system as standard *For more detail, see page 8*

OVERWHELMING PRODUCTIVITY

High torque at low engine speeds

The output of the Komatsu SAA6D114E-2 low-emission engine is 140 kW (187 HP) at only 2.000 rpm. This means a constant, high power output with a 10% reduction in engine speed, compared with its predecessor. The increased engine torque and the improved torque characteristics, and also the arrangement of the newly introduced "High-Power" torque convertor contribute to a substantial improvement in traction and climbing abilities. In Load & Carry operations, faster work cycles are achieved with simultaneous savings in fuel consumption.

New 2-stage hydraulic system

The working hydraulic system adapts itself excellently to your specific needs: The main and switch pump together supply great capacity for high-speed loading cycles. The main pump alone supplies a reduced oil quantity for force and the maximum tear-out strength. And there's something new: when you press the kick-down switch, the alternate pump is switched off. This means that the maximum tractive force is available while simultaneously lifting the bucket. This is important, for example, when loading feed hoppers on a steep ramp.

Maximum dumping height and reach

The long lifting frame allows an enormous dumping height of 2.970 mm and a reach of 1.080 mm that is just as impressive (with 3,1 m³ universal bucket, measured to the cutting edge).

With this working range, loading high-sided semi-trailers with a payload of 28 tonnes becomes child's play.

WA380-5

Mode selector switch for the engine

The operator can simply change between two modes depending upon the job. In the **Normal** mode, fuel consumption is clearly reduced by utilising a reduced-power characteristic map for the engine. This is of benefit with all general loading work. If the operator switches to **Power**, he immediately has the maximum power, for instance for hard digging or driving up steep inclines.

Mode selector switch for the transmission

The transmission of the WA380-5 can also be adapted brilliantly to every need with the selector switch. The transmission selector switch allows the operator to select between manual transmission shifting and three automatic modes (high, medium and low). You can also find the perfect setting from saving the maximum fuel and the highest power by moving the gear-changing time depending upon speed.

New Options for even greater Productivity

Faster Load & Carry with torque converter lockup

The operator may also utilise direct drive in third and fourth gear for optimum efficiency in Load & Carry. Clearly the speed increases, especially when driving uphill where the wheel loader travels significantly faster because of the increase in tractive force. At the same time, the converter loss is eliminated, thus clearly reducing fuel consumption.

Semiautomatic dig

Something new in the world is Komatsu's patented function of semiautomatic bucket filling. A pre-programmed bucket filling process is carried out with the aid of the electrical pilot control. This means that it is no longer necessary to manually move the bucket lever when driving into material. This also means that operators with little experience still have productive loading cycles. And for the professionals, it's noticeably easier to operate with greater convenience.

Payload meter

The new payload weigh scale allows perfect control of loading processes and loading power. The large and easily read display in the middle of the main monitor shows the operator a pictorial representation of each bucket load and the material quantity already loaded. Various modes allow you to alternately display the weight already loaded or how much the operator still has to load for a pre-set amount. The system also allows you to store and print out the daily output and loading output of five different materials.

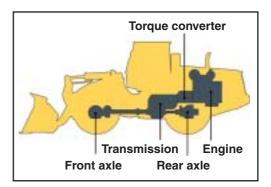

Œ

100000

LONGEVITY AND RELIABILTY

Quality you can rely on!

The engine, transmission, torque converter, front and rear axles are original Komatsu components. All of these component parts are subject to the highest quality requirements and strict quality assurance right down to the smallest screw. They are fully co-ordinated with one another, thus offering maximum efficiency and reliability.

WA380-5

Torsionally resistant frame

The frame design with hinge points far apart guarantees the high stability for the overall construction and reduces bearing stress in the torsional ranges. Steering angles of 40° give the WA380-5 a high degree of manoeuvrability.

Robust HD-axles

The heavy-duty axles allow above-average service life even under the hardest working conditions. The WA380-5 can also have the optional equipment of multiple-disc limited slip differentials to further increase tractive force.

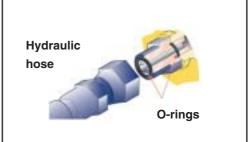

Reliable construction equipment engines

Komatsu's reliable engine, with thick walled crank case, was developed with low noise and robustness in mind.

Reliability right down to the details

All of the hydraulic connections are reliably protected against oil loss by Komatsu's O-ring seals. Komatsu's hydraulic cylinders are equipped with special guide rings to protect and support the cylinder rods. The electrical system is also designed for long-lasting operation (without breakdowns) with its dust- and water-proof DT plug-and-socket connections in the wiring harnesses.

SIMPLE AND FAST MAINTENANCE

Simple and convenient access to service

The service doors are designed as gull-wing doors. They allow you convenient and safe access to the daily service points from the ground.

Reversible hydraulic radiator fan and swingout coolers

The radiator fan can be switched to reverse operation from the cabin for work in dusty environments. Furthermore, oil cooler and air to air charge cooler can be swung out for easy access and fast cleaning.

EMMS (Equipment Management Monitoring System)

This completely new type of monitoring system is clearly structured and easy to read because it is directly in the operators field of view. If there is a malfunction, it immediately displays the details in the chosen national language and in plain text in the display field. This system not only has an error memory and a self-diagnosis function, but also a service interval display. This significantly simplifies service work and the operator is notified on time of the regular oil and filter changes. The operator and customer-service engineer are constantly informed about the optimum machine state so that problems don't even occur in the first place.

WA380-5

Maintenance-free braking system

The fully hydraulic dual-circuit service brake with multi-disc brakes running in an oil bath offers you the highest degree of safety and a long service life. Something new is the fact that the braking system can be operated with even greater precision. Since it functions completely hydraulically, you no longer have the drawbacks of a compressed air braking system. The benefits of the new system are that weathering has no effect on it, it is available for work immediately after starting the engine and it's maintenance free. The multi-disc internal parking brake is also maintenance free.

Centralised lubrication system as standard

The centralised lubrication system reduces the daily service work to the absolute minimum. Its robust piping with protective equipment in all areas ensures consistant lubrication amounts, operating reliability and electronic monitoring with a malfunction signal in the cabin. This increases the machine's service readiness and service life while lowering repair and service costs.

Customer service and spare parts supply

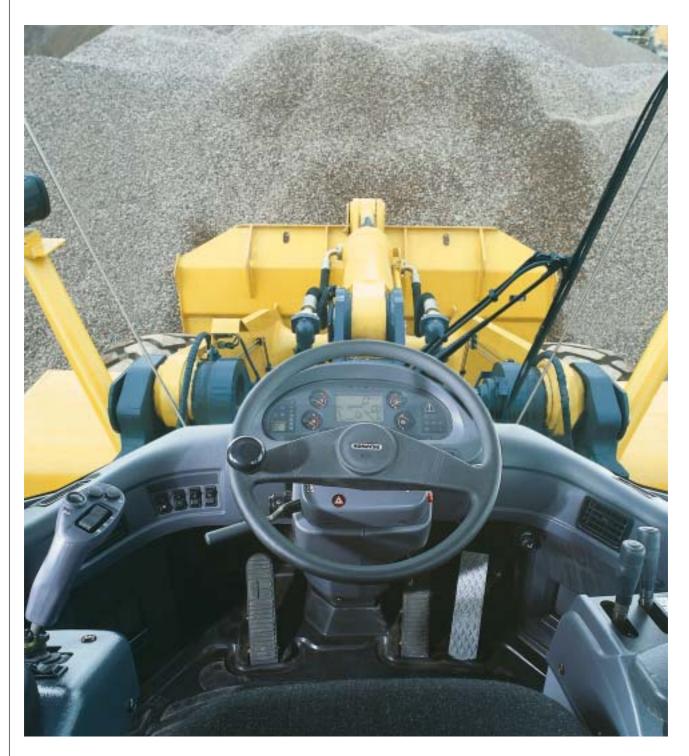

When you buy a Komatsu construction machine, you buy a lot more than just the product alone. Our service support accompanies you throughout the entire life of your wheel loader. Programs for preventative maintenance are just as much a part of what we offer as the complete range of dealer service and repair programmes.

And, if there is a malfunction, Komatsu's close-knit network of dealers and excellent parts service ensures you minimum downtime.

WA380-5 WHEEL LOADER

THE SPACECAB

Perfect driving convenience and the best all-round visibility

The cabin is the largest in its class and offers you unparalleled driving convenience comparable to that of a passenger car. The large frameless windscreen, ensures an optimum view of the bucket and tyres, and the slanted rear end also gives an excellent view towards the rear. The cabin is mounted on viscose shock absorbers guaranteeing an interior noise level of only 70 dB(A), one of the lowest in this class. That together with air conditioning as standard ensures the operator's well-being just as much as the air-cushioned multi-adjustable premium drivers seat with head rest, seat heater and lumbar support. The easy-to-work hydraulic operating controls on the multi-adjustable hydraulic console makes it possible to operate the wheel loader conveniently and ergonomically. The operator's well-being is ensured over long and productive hours.

WA380-5

SIMPLE & CONVENIENT OPERATION

Adjustable steering column with built-in monitor unit

The steering column with continuous tilt and height adjustment incorporates the monitoring system allowing the entire unit to be brought into the most favourable position for each individual operator. The two-spoke steering wheel makes it possible to read all of the displays and instruments without any problems.

Automatic transmission with variable transmission cut-off

The electronically controlled automatic transmission with mode selection allows you to conveniently adjust to each job. The operator can continuously adjust the transmission cut-off activated through the left brake pedal: for instance, reacting to high cut-off pressure when excavating or low pressure for smooth braking when approaching lorries.

New and easy-to-use joystick steering (option)

A new Joystick steering system is available as optional equipment, and ensures that steering can be wrist operated easily and conveniently in loading operations. This system allows you to change the direction of travel and gear shifting with push buttons on the joystick. And you may pre-select the steering speed in 2 stages, depending upon whether fast V-loading or precise Load & Carry is required.

Smooth ergonomic hydraulic control

The new pilot control levers are designed as finger tip control levers for precise and fatigue-free control of the loading process. The position of the levers and the location of the entire console can be adjusted for all operators preferred height and reach. EPC equipment is also available as optional equipment for controlling the working hydraulic system. Apart from the electronic pilot control of the finger levers, EPC offers a modulating function for slowing and stopping bucket movements when lowering, that is vibration-free. Furthermore, the upper and lower boom cut out position can be pre-set with a switch that ensures major ease of operation for the operator when work is constantly changing such as in loading lorries. As a third feature, EPC equipment has a semiautomatic excavating function for simple filling buckets (also refer to page 6).

A multifunctional lever design is also available as optional equipment.

BUCKETS AND ATTACHMENTS

Universal bucket

This type of bucket is impressive because of its excellent penetration and loosening properties and its good material holding properties.

This universal bucket can be equipped with flush mount adapters and interchangeable teeth.

Earthmoving bucket

The earthmoving bucket with a one-piece bucket bottom is suited both for earthworks and loading cohesive material. The slanted sides give powerful penetration. It is equipped either with flush mount adapters and interchangeable teeth or also with a rear removable edge.

Rock bucket

V-shaped buckets offer excellent penetration properties for medium heavy-duty rock jobs. Robust hardox design wear plates ensure a long service life. We have a selection of optional equipment with the high wearresistant KVX[™] cutting tools for extremely abrasive jobs.

Maximum dumping height with High-Lift

The dumping height and reach can be increased for special jobs with the optional high-lift lifting frame. You may increase dumping height by approximately 53 cm and the reach is increased by approximately 16 cm.

Hydraulic quick coupler

The WA380-5 can change attachments in a matter of seconds with the HD designed hydraulic quick coupler, available as optional equipment.

A comprehensive range of attachments

The timber grab: With its sturdy structure and its great hydraulic power and a special tilting cylinder, the WA380-5 is also perfectly suited to work in the timber industry. The robust design of the lifting frame and axles ensure maximum durability.

WA380-5

WHEEL LOADER

STANDARD EQUIPMENT

- Universal bucket 3,1 m³ (SAE, heaped)
- Automatic return-to-dig
- · Automatic boom kick-out Counterweight
- Hydrostat-driven radiator fan
- with reversing function · Swing-out oil and air to air
- charge cooler • 2-spool main control valve
- Central automatic lubrication
- Electronically controlled, load stabilizer (ECSS)
- 2nd generation Fully hydraulic brake system
- Corrosion resistor
- · Power train guard
- Tyres 23.5 R25 L-3

- · Heavy-duty axles
- Electronically controlled ECMV automatic transmission with mode selector and variable transmission cut-off
- Alternator 60 A
- Starter motor 11 kW/24 V Batteries 143 Ah/2×12 V
- · Spacious double door driver's cab to DIN/ISO
- ROPS/FOPS frame to SAE
- All-round tinted glazing
- Front laminated glass
- · Electronically controlled
- air conditioning
- · Heated rear window • Rear window wiper
- Air-suspended, heated seat

- Sun visor
- Seat belt (EU standard)
- PPC fingertip control, two levers
- EMMS (Equipment Management Monitoring System) with self-diagnostic function and maintenance display
- · Vertically- and horizontallyadjustable steering column with integrated monitor
- Stereo-cassette radio
- 2 halogen main headlights
- · 2 spotlights at front and rear Reversing light
- Horn
- · Handrails on left/right

- Emergency steering system
- Vandalism protection

 Tunnel specification Anti-Corrosion specification

General operating certification,

Further equipment on request.

in accordance with German

Road Traffic Regulations.

Tool-set

The WA380-5 is equipped in accordance with the safety regulations of the machinery guidelines 89/392 EWG ff and EN474, and corresponds in its exhaust gas emission values with the regulations of the EC 2000/14, VIII and EC 97/68 Stage II regulations.

OPTIONAL EQUIPMENT

- · High-lift equipment including high-lift counterweight 430 kg
- · 3-spool main control valve
- Add. counterweight 325 kg
- Limited-slip differential (LSD) front and rear
- Torque converter lock-up
- Tyres 650/65 R25
- Tyre guard chains
- Universal bucket 3,3 m³
- Earthmoving bucket 3,1 m³
- Earthmoving bucket 3,3 m³
- Stock pile bucket 3,5 m³
- Stock pile bucket 3,6 m³
- Heavy-duty bucket 3,0 m³
- Heavy-duty bucket 3,2 m³
- Light materials bucket 4,5 m³
- Special buckets

- Various tooth systems, BOC. segments, (Komatsu/KVX™) and other optional bucket accessories are available on
- request Quick coupler
- Log grapples
- Batteries 180 Ah/2×12 V Joystick steering with
- integrated F/R transmission function, 2-stage
- PPC control, 1-lever (Multi-function lever)
- Electronic 2-lever control (EPC) Biodegradable oil for including:
- Bucket stop modulation
- Boom stop pre-setting
- Semi-automatic dig function

- · Payload meter

- Turbo II pre-filter

- 20 km/h version
- Full rear fenders
- · Battery main switch
- · Fire extinguisher
- hydraulic system
- Special paintwork
- Wastehandler specification
- Steelhandler specification
